Guide on how to OC 3570k with Asus P8Z77-V? I'm getting a PC built with in the week and want to go a head with overclocking except I don't really know how. I'd like to get it into the 4.2-4.5 range without messing around with the voltage too much and with as little hassle as possible (and not using any quick features out of fear that they are more likely to break my PC than me).

This will allow your CPU to pull more power than its listed TDP, a requirement for higher overlocks. Hit F10 to save the changes you've made and restart the PC. Fire up Core Temp, CPU-Z, and Prime 95. The CPU should clock up to 4.7GHz, but you'll likely find that your CPU temperatures will be in the range of 90°C+.
