Air screw are at the bottom back of the intake bell. Fuel screws are a total different animal and on the top in the front of the carb. Carbs will have one or...

Air screw adjustment Mikuni carbs only - YouTube

A: There are two screws to adjust when setting the idle on a carburetor. One adjusts the slide height and is called the idle speed screw, while the other adjusts the air-to-fuel ratio and is called the idle mixture screw. The manual for the AT1 says start the idle mixture screw at 1-1/2 turns counterclockwise from fully screwed in (lightly seated; don't screw it tight), then adjust either way in 1/2 turn increments to find the fastest, smoothest idle.
