Psychology research can usually be classified as one of three major types. 1. Causal or Experimental Research . When most people think of scientific experimentation, research on cause and effect is most often brought to mind. Experiments on causal relationships investigate the effect of one or more variables on one or more outcome variables. This type of research also determines if one variable causes another variable to occur or change.

### Methods in Psychology 8th Edition

The experimental method involves the manipulation of variables to establish cause and effect relationships. The key features are controlled methods and the random allocation of participants into controlled and experimental groups. An experiment is an investigation in which a hypothesis is scientifically tested.

This is an experimental psychology text focusing on experimental methodology and the scientific way of thinking. Provides
