patient in selecting possible diseases Evaluate, exclude or confirm possible diagnoses Make the correct diagnosis using an appropriate diagnostic procedure In experienced hands Professor Walter Siegenthaler brings decades of international experience in clinical practice, teaching and writing on internal medicine to this new book. The book also benefits from close cooperation with the leaders of the specialist internal medicine departments at the University Hospital Zurich, and of other institutions and disciplines. The generalist and specialist aspects of internal medicine are thereby brought together to enhance the approach to the patient. Your guide to successful diagnosis! The book is directed at medical students, residents in most areas of medicine, practitioners of internal medicine, general practitioners, dermatologists, neurologists and rheumatologists and those involved with the basic subjects in medicine who wish to gain competence and knowledge in internal medicine. From Symptom to Diagnosis Organized by functional system and symptom constellations Covers all fields of internal medicine plus special treatment of subjects dermatology, neurology and rheumatology Typical findings and signs for differentiation of all common, rare and even exotic diseases with pathophysiological background information Nearly 1000 stunning figures and many instructive table-format overviews and differential diagnostic algorithms Differential diagnostic evaluation of common laboratory test results, including step-by-step plans for further diagnosis Learn by tracing the path from symptom to diagnosis, just as the physician encounters the situation in practice!

This innovative new textbook has been written and designed to meet the needs of students in today's medical curriculum. It takes an integrative, common-sense approach to the topic of history taking and examination, incorporating - where necessary - relevant anatomy,

physiology, pathology and other aspects of clinical medicine: Each major topic is covered in a series of two-page learning units which feature:

- Concise yet comprehensive text
- Fully integrated colour diagrams and clinical photographs
- Summary tables for quick reference
- 'key point' boxes for reinforcement and revision

An introductory section details the basic tenets of history taking, sequence of examination and common clinical signs. Next follows a system-by-system overview of examination techniques and the common clinical conditions encountered. A third section considers special topics such as exam taking technique, doctor-patient communication and dealing with potentially violent patients or those unable to provide a history. The text is written by a hospital physician using a minimum of medical jargon and with close attention to the essential information and techniques that every student must know.

More than two million medical students, doctors and other health professionals around the globe have owned a copy of Davidson ' s Principles and Practice of Medicine since it was first published. Now in its 23rd Edition, this textbook describes the pathophysiology and clinical features of the most frequently encountered conditions in the major specialties of adult medicine and explains how to recognise, investigate, diagnose and manage them. Taking its origins from Sir Stanley Davidson ' s much-admired lecture notes, Davidson ' s has endured because it keeps pace with how modern medicine is taught and provides a wealth of information in an easy-to-read, concise and beautifully illustrated format. This book will serve readers everywhere as a core text that integrates medical science with clinical medicine, conveying key knowledge and practical advice in a highly accessible and readable format. The opening section describes the fundamentals of genetics, immunology, infectious diseases and population health, and discusses the core principles of clinical decision-making and good prescribing. A new second section on emergency and critical care medicine encompasses poisoning, envenomation and environmental medicine, and introduces a new chapter on acute medicine and critical

illness. The third section covers the major medical specialties, each thoroughly revised and brought fully up to date. Two new chapters on maternal and adolescent/transition medicine complement the one on ageing and disease. A new chapter on medical ophthalmology has been included. Clinical Examination overviews summarise the main elements for each system and now feature in the biochemistry, nutrition and dermatology chapters. Presenting Problems sections provide a clear pathway for the assessment of and approach to the most common complaints in each specialty. Practice Point summaries detail the practical skills that medical students and junior doctors must acquire. Emergency boxes emphasise the core knowledge needed to manage acutely ill patients. In Old Age, In Pregnancy and In Adolescence boxes highlight differences in the practice of medicine in these patient groups, and illustrate the interfaces between medical, obstetric and paediatric services. The text is extensively illustrated, with over 1000 diagrams, clinical photographs, and radiology and pathology images. The global perspective is enhanced by an International Advisory Board of experts from 17 countries, and by authors from around the world.

This highly readable textbook provides a comprehensive but concise overview of the principles of oncogenesis in veterinary medicine, discussing selected tumors in domestic animals in detail, and addressing cancer diagnostics and therapy. All chapters are illustrated with histological and radiological images to enhance readers' understanding. Accordingly, the book is a must-have reference guide for all graduate and advanced undergraduate students in Veterinary Medicine with a special interest in oncology.
