In the coming years, the demand for water will increase as food production grows, populations grow and move, industries develop and consumption increases. This can lead to water stress, as increasing demand and use of water strain available supplies. One of the most effective ways to protect children in the face of climate change is to safeguard their access to safe water and sanitation.

Thirsting for a Future | UNICEF

14 Thirsting for a Future: Water and children in a changing climate Everyone needs water to survive. Water fuels bodies, irrigates crops, drives industry, generates energy and cleans our bodies, clothes and homes. Access to safe water is particularly important to children as they grow.

Thirsting for a Future - UNICEF

UNICEF Thirsting for a future When 12-year-old Swapna went back home the day after Cyclone Roanu hit Bangladesh in 2016 she could not believe her eyes - the entire neighbourhood, even the trees, had disappeared. In Zimbabwe, drought left Emmanuel struggling to feed his family. He agreed to a dowry of a few goats for his 15-year-old daughter.

UNICEF Thirsting for a future

Highlights Climate change is one of many forces contributing to an unfolding water crisis. In the coming years, the demand for water will increase as food production grows, populations grow and move, industries develop and consumption increases.

Thirsting For A Future Unicef

Posted on March 22, 2017 by Kevin McMaster. Blue Raster collaborated with The United Nations Children's Fund (UNICEF) to help produce Thirsting for a Future: Water and children in a changing climate. In a targeted study of Water, Sanitation and Hygiene using current climate and projected climate conditions, Blue Raster and UNICEF determined that by 2040, nearly 600 million children are projected to be living in areas of extremely high water stress.

Thirsting for a Future: UNICEF | Blue Raster

2 Thirsting for a Future: Water and children in a changing climate Foreword Water is elemental. Without it, nothing can grow. And without safe water, children may not survive. Children without access to safe water are more likely to die in infancy -- and throughout childhood -- from diseases caused by

Executive Summary - UNICEF

Thirsting for a Future: Water and children in a changing climate snow and ice, and rising sea levels,

all threaten the water For children, dehydration occurs quickly and can be deadly.

Thirsting for a Future: Water and children in a changing ...

Thirst itself kills children and jeopardizes their futures. And beyond health, a lack of safe water and sanitation exposes children to other threats to their wellbeing. Many children in drought-affected areas spend hours every day collecting water, missing out on a chance to go to school.
